Will Wu

Senior Backend Engineer

will413028@gmail.com · +886 911-279-755 · Taipei, Taiwan · Portfolio · LinkedIn · GitHub

SUMMARY

Backend-first engineer who ships whole products: built a commercial AI meeting-summarization app solo in 3 months that now serves paying customers, plus a cloud POS and an EV-rental system in ~2 months each.

WORK EXPERIENCE

APMIC (enterprise AI platform for on-premises LLM deployment and model fine-tuning) — Nov 2025 – Present
Sr. Backend Engineer *Python (FastAPI), React, Next.js, PostgreSQL, Hasura, RabbitMQ, Google ADK* — Taipei, Taiwan

- **Shipped SAML 2.0 SSO and an RBAC redesign for a global insurance client**, closing a privilege-escalation gap; traced an SSO failure to a vendor XSD-validation conflict and hot-patched production.
- **Cleared the client's pre-audit security scan for an on-premises delivery** (static findings 5 → 0, dependency vulnerabilities 16 → 2, `npm audit` 20 → 0) by triaging 1,699 raw findings down to 6 production-code sites.
- **Cut AI report generation from 7m37s to 1m57s** with asyncio parallelization, and **quarterly-report Q&A from ~80s to ~7s** by timing download and parse separately and swapping the spreadsheet reader.
- **Shrank the agent state machine from 721 to 144 lines** with declarative flow control (behavior locked by 50 characterization tests), while consolidating a Google ADK agent platform into one FastAPI service with HMAC-SHA256 request signing.

Vocus (Taiwan's top-tier content-creator platform; ~3M weekly API calls) — Mar 2025 – Oct 2025
Sr. Backend Engineer *Go (Gin), MongoDB, Redis, Qdrant, Cloudflare, AWS, GCP* — Taipei, Taiwan

- **Reduced MongoDB p95 latency on hotspot endpoints by 80%** by replacing `$lookup` cross-collection joins with single-collection reads and application-layer joins (goroutine fan-out).
- **Lowered recommendation infrastructure cost by 20%** by migrating from BigQuery to a self-hosted Qdrant vector DB, removing per-query pricing on the highest-traffic path.
- **Owned the NewebPay payment migration to iframe-redirect mode** across all 4 payment types (subscription, one-time, recurring, donation), reducing PCI-DSS scope by moving card-data collection to the gateway.

ChengChi Tech (early-stage startup building POS, EV-rental, AI and ERP products) — Apr 2024 – Mar 2025
Sr. Backend Engineer *Python (FastAPI), Next.js, Tauri, PostgreSQL, Redis, GCP, Azure* — New Taipei, Taiwan

- **First and only senior backend engineer**: architected 9 microservices from scratch (Python 3.12 / FastAPI), owned all backend architecture and code review, and mentored juniors as the team grew from 4 to 7–8.
- **Shipped three products solo**: an AI meeting-summarization app in 3 months (WhisperX + Ollama + Tauri), now serving paying customers, plus a cloud POS and an EV-rental system in ~2 months each.
- **Cut deployment time by 50% and infrastructure overhead by 30%** by building CI/CD (self-hosted GitLab CI + Ansible), Terraform IaC, and SonarQube quality gates from zero.

AI-Rider (parking-technology company; POS and devices across ~1,000 parking sites) — Mar 2022 – Nov 2023
Backend Engineer *Node.js (Koa), Python (Flask), MariaDB, Redis, RabbitMQ, Modbus TCP* — New Taipei, Taiwan

- **Primary backend engineer on the POS system for ~1,000 parking sites**, whose flagship client brought in 50%+ of company revenue; handled multi-tenant billing (time tiers, monthly passes, EV-charging pre-auth).
- **Architected a hardware abstraction layer for 10+ device types** over Modbus TCP (ANPR cameras, gate arms, ETag readers, LED boards) behind one REST API.
- **Halved SQL execution time** for a customer with ~4–5M parking records using EXPLAIN analysis and compound indexes.

SIDE PROJECTS

bfx-funding-bot — Algorithmic Crypto Funding Bot (Solo) *2026 · Python (asyncio), PostgreSQL, Docker · case study*

- **Built and run a live, real-money Bitfinex margin-funding bot** on an event-sourced ledger reconciled against exchange snapshots; fixed 6+ production incidents on live capital, each shipped with a canary check.
- **Raised order-book data availability from 3.9% to 99.6%** and cut cold-start quoting from 60 min to 14–27 s; realized net APR of 3.75–5.14% in lending weeks, reconciled to the exchange's own ledger within 0.1–2.9%.

divego — Full-Stack Migration (Solo) *2026 · TypeScript (Next.js, Hono, Drizzle) · case study*

- **Retired a Python backend (~567 tests)** via a strangler-fig migration to a unified Next.js full-stack app (Hono + Drizzle).

SKILLS

Languages	Python, Go, TypeScript, Java, Dart
Backend & Data	FastAPI, Gin, Spring Boot, Hono · PostgreSQL, MongoDB, Redis, Qdrant · RabbitMQ · gRPC, GraphQL
Cloud & DevOps	GCP, AWS, Azure, Cloudflare, Alibaba Cloud · Docker, k3s, Terraform, Ansible, GitLab CI
AI & Frontend	Google ADK, Ollama, WhisperX, PyTorch · Next.js, React, Tauri, Flutter

EDUCATION

George Mason University — MS, Data Analytics Engineering — 2019 – 2021
Tatung University — BS, Chemical Engineering — 2013 – 2016
